

Chanzi Ltd

Chanzi Ltd produces protein for animal feed by feeding low grade organic waste to larvae. The larvae are harvested and dried and mixed into animal feed. Chanzi (Black soldier fly larvae) consist of 50% high quality protein and 20% fat. Chanzi is the only protein you need to replace soya and fish meal in animal feed - it's cheaper, healthier, good for the environment and will make your livestock, poultry and fish grow much faster! Chanzi is also a great protein supplement for pet food.

Location

- Njiro Sunflag road
- Country: Tanzania, United Republic of
